

GREEN DESIGN FROM DRU SUSTAINABLE SOLUTIONS FOR HOME HEATING

Under the Green Design label, we develop fireplaces that combine contemporary design with sustainable technology. And with our Dik Geurts and Spartherm brands, we create freestanding and built-in woodburning fires and stoves that provide atmospheric fireplace experiences together with efficient home energy solutions.

Would you like to know more about a CH fire in your home?

For further information about Green Design, visit a dealer near you or go to:

INSTALLATION ADVICE

The Ivar 10 H2O, Store must be installed by a fully qualified HETAS engineer and connected to a buffer tank, not directly to the central heating system. It is also possible to connect the system to solar panels for even more efficiency. For a full consultation on what is the best solution for your home, contact an approved DRU dealer.

SUITABLE FOR MOST HOUSE TYPES

New-build, refurbishment or Passive House, a CH fireplace is suitable for almost any home.

Easy to connect to your (existing) CH installation.

THE SUSTAINABLE SOLUTION FOR HOME HEATING

The Dik Geurts Ivar 10 H2O, Store is not simply a beautiful wood stove. With its dual water heating function, it is also a CH (central heating) stove, reducing your dependence on gas, and reduce your carbon emissions from gas used to heat more water. As it provides heat and warm water, a CV stove is a cost efficient option in a world of rising energy prices.

HEAT LOSS IS REDUCED BY UP TO 30%

YOUR HOME - YOUR STOVE

As you enjoy the comforting warmth and dancing flames of your classic wood stove, the heat circulates throughout the home, boosting the amount of hot water you need for radiators, showers and even the washing up.

So, while the adults enjoy the warmth of the living room, the children can take comfort in their bedrooms and studies, knowing that their CH stove is working tirelessly for the whole family.

HOW IT WORKS

Your Ivar 10 H2O, Store is an elegant, contemporary wood stove, combined with a 'water jacket' that acts as a heat exchanger. Water is heated by the burning logs and flows into a buffer tank, where it circulates to bedrooms, bathrooms and other locations around the home. Hot water that you do not use immediately is stored for later, known as 'heat-on-call.'

You can also connect the system to solar panels to further reduce your gas consumption and take control of your household finances.

With the Dik Geurts Ivar 10 H2O, Store, you can enjoy a warm and efficient home all year round.

HEAT YOUR HOME WITH THE DIK GEURTS IVAR 10 H2O, STORE

Harness the power of your wood burning stove for maximum efficiency

TAKE CONTROL OF YOUR HOME HEATING.

As you bask in the warm glow of your woodburning stove, you can feel sure that none of the energy it generates is going to waste. Hot water is constantly stored and recirculated around the home, reducing your gas bills and making your life cleaner and greener.

RELIABILITY

THE LUXURY OF A WOOD STOVE, THE VERSATILITY OF A WATER HEATER

The Ivar 10 H2O, Store is a durable and desirable wood stove with a substantial 4.7 kW room heating output, combined with a further 5.5 kw of water heating power. It has a stylish dark anthracite finish, easy slider controls, vermiculite interior and ample space underneath for log storage. There is a choice of internal or external air connections for greater efficiency. And with its smart and unique water heating system, it is the stove for all seasons.
